I. Computer Vision in a nutshell

Computer Vision

“Computer vision is an interdisciplinary field that deals with how computers can be made for gaining **high-level understanding from digital images or videos**. From the perspective of engineering, it seeks to **automate tasks** that the human visual system can do.”

1. See
2. Describe
3. Understand

Example

II. Visual Recognition

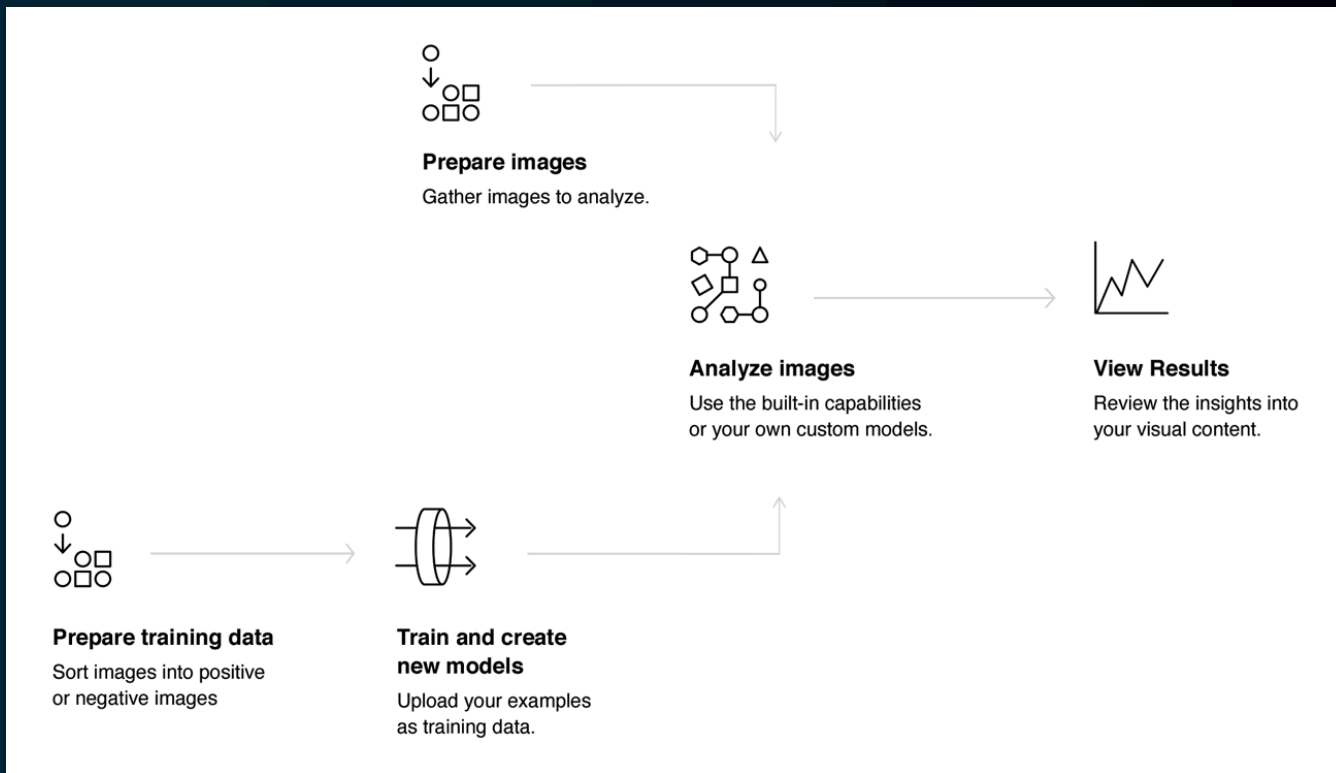

Different options

- Use a pre-trained model
- Create your personally-trained model
- Use or create the Deep Learning algorithms of your choice for object detection

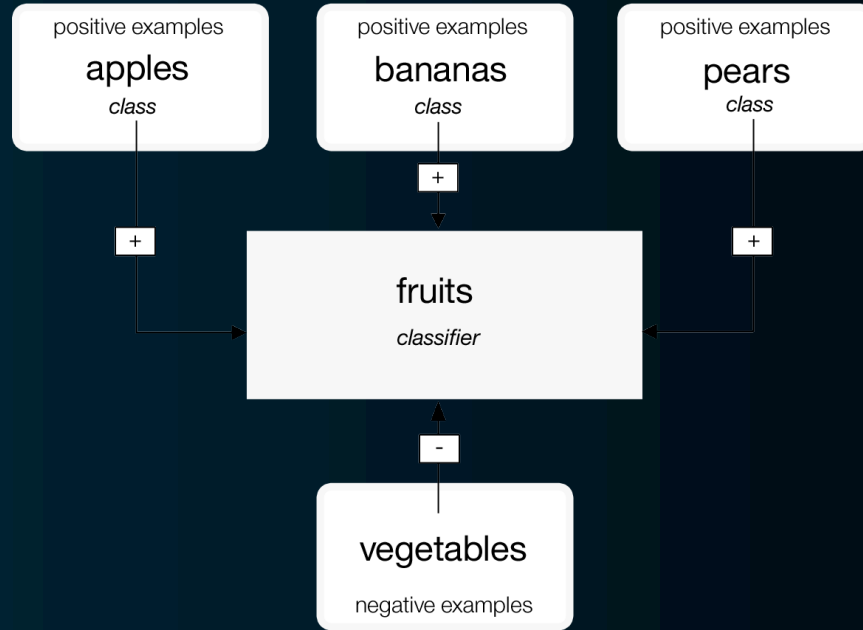

Providers

- Clarifai
- IBM Watson Visual Recognition
- AWS Amazon Rekognition
- Google Cloud Vision API
- Microsoft Computer Vision API
- ...

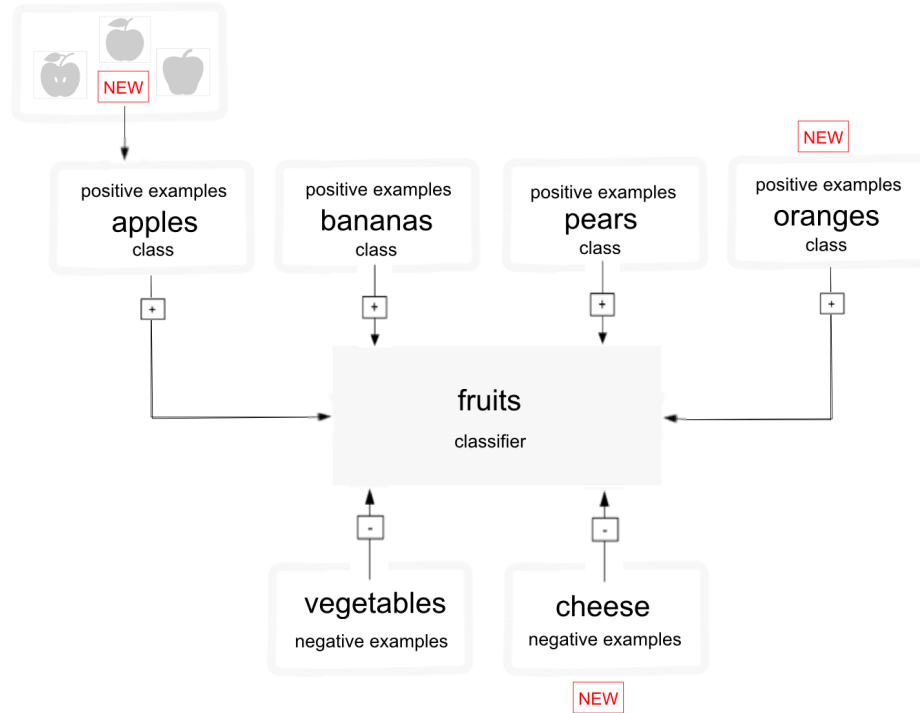

Use pre-trained models

Create your own model

Update your own model

Choose your deep-learning algorithm

Frameworks:

- TensorFlow
- Caffe
- Keras
- PyTorch...

Asset exchanges:

- Model Asset Exchange (MAX) - <https://developer.ibm.com/code/exchanges/models/>
- TensorFlow Hub - <https://www.tensorflow.org/hub/>

Demo

Hands-on Workshop
